START HERE

Getting started

Welcome to Zordic. Here's everything you need to log in and get comfortable in your first five minutes.

- 1 **Your login link.** You were given a private web address that looks like `zordic.in/login/your-cafe-id` — this is yours alone. Bookmark it on every device you'll use to manage your café.
- 2 **Your first credentials.** A username and a temporary password were shown to you once during sign-up. If you saved them, use them now to log in.
- 3 **Change your password immediately.** Head to the Settings tab (covered later in this guide) and set a password only you know.
- 4 **Add your real menu.** If you haven't already, go to Menu & Pricing and replace the sample items with your actual dishes, prices, and photos — your AI receptionist answers customer questions directly from what's here.
- 5 **Print your table QR codes** from the Table QR Codes tab and place one on every table.
- 6 **Connect WhatsApp** so your AI can actually talk to customers — see the dedicated section near the end of this guide.

Tip: the Overview tab shows a "Get Set Up" checklist the first time you log in — it tracks these same steps for you automatically.

HABIT

Your daily 5-minute routine

You don't need to watch Zordic all day — your AI is working even when you're not looking. But two short check-ins a day keep everything running smoothly.

Morning

- 1 Open the **Overview** tab. If there's a "Needs You" card, deal with it first — it's always something a real customer is waiting on.
- 2 Glance at today's **Reservations** so your team knows what to expect.
- 3 Skim **Customer Chats** for anything interesting from overnight.

Evening

- 1 Check **Orders & Revenue** to see how the day went.
- 2 If any **Offer Requests** are still pending, approve or decline them before you close.

Everything else — answering questions, taking bookings, awarding loyalty points, nudging lapsed customers to come back — happens automatically.

THE IMPORTANT PART

How your AI receptionist works for you

Your AI answers customers on WhatsApp instantly, any hour of the day — but it's deliberately built to never make a decision that should be yours.

It handles on its own: menu and price questions, table bookings under 8 guests, WiFi and timings questions, loyalty point lookups, and — if you've set a limit in the Menu tab — small discount requests up to that limit.

It always pauses and asks you first when a customer:

- 1 Makes a genuine **complaint or asks for a refund**
- 2 Requests a **table for 8 or more guests**
- 3 Has a **payment or billing problem**
- 4 Asks something the **AI genuinely doesn't know the answer to**

In every one of these cases, the customer gets a warm holding reply ("I've let the owner know, they'll be in touch shortly") and you get an alert on your WhatsApp *and* a card on your Overview tab — with the AI's own suggestion for what to do next. You're never blindsided, and the customer is never left hanging.

Signing in

Every café gets its own private link — nobody else can log into your account, and you can't see anyone else's. Bookmark this page on your phone and computer; you'll use it every day.

Staff Sign In

SIGN IN

SIGNING IN TO
BREW HAVEN CAFE
Indiranagar, Bengaluru

1 USERNAME
Enter your username

2 PASSWORD
Enter your password

3 SIGN IN TO DASHBOARD

[Forgot your password?](#)
[Customer Portal](#)

- 1 Username**
The username you were given when you signed up. If you forget it, contact Zordic support.
- 2 Password**
Your login password. Tap the eye icon to check what you typed before submitting. If you forget it, use "Forgot your password?" below — a reset code is sent to your café's WhatsApp number.
- 3 Sign In to Dashboard**
Takes you straight to your Manager Dashboard — the control centre for your whole café.

The Overview tab — your morning check-in

This is the first thing you should look at every morning. In under a minute you'll know: is anything urgent waiting for me, how's business trending, and what's booked today.

1 Sidebar navigation

Every feature in Zordic lives here, grouped into Operations, Customers, Marketing, and Tools. This never changes no matter which tab you're on — use it to jump anywhere.

2 "Needs You" card

This is the single most important box on the whole dashboard. Your AI receptionist handles almost everything on its own — but for a genuine complaint, a big group booking, a payment problem, or a question it can't answer, it pauses and asks you. Read the customer's message and the AI's suggested next step, then either message them directly on WhatsApp or tap Mark Handled once you've sorted it out. This card disappears when nothing needs you.

3

KPI cards

A fast pulse-check of your café: pending reservations, how many customers are in your CRM, your average review rating, and any discount requests waiting for approval.

Reservations

Every table booking — whether the customer typed it into WhatsApp or filled a form on your website — lands here. Nothing is ever double-booked without you seeing it first.

- 1

Reservations table
Shows the guest's name, phone number, party size, requested date and time, and current status. Large bookings (8 or more guests) are never auto-confirmed by the AI — they always wait here for your okay, because bigger groups deserve a personal touch (and a chance for you to plan seating and offer a set menu).

Menu & Pricing — and how much the AI can discount

This is where you keep your menu accurate — and it's also where you decide exactly how generous your AI receptionist is allowed to be when a customer asks for a deal. Get this right once and you never have to think about it again.

Enable browser notifications to get alerted for new orders, reservations & WhatsApp messages.

AI Discount Limit — café-wide default

Used when a customer asks for a deal without naming a specific item. Per-item limits (the "AI Max %" column above) override this for that item.

Default maximum discount AI can offer

210

%

Save Limit

Set to 0 (default) and the AI forwards every discount request to you for approval. Set it above 0 and the AI instantly grants a goodwill discount up to this % — with a tracked coupon code the customer shows at billing. Requests beyond this limit are still sent to you.

- 1

A menu item row

Item name, a short description customers see on WhatsApp and the order page, an optional photo link, category, price, and a standard discount percentage (shown to every customer, e.g. "10% off today"). The green Available toggle lets you instantly 86 an item that's run out — the AI will stop offering it the moment you switch it off.
- 2

AI Max % (per item)

This is the maximum discount your AI receptionist is allowed to offer on this specific item, on its own, without asking you first — for example, 25% only on Cold Coffee. Leave it at 0 to always ask you first for that item. Use this to be generous on high-margin items and cautious on thin-margin ones.

CRM — everyone who has ever ordered

Every customer who messages your AI or places an order is automatically added here — no manual data entry. This is your café's memory of every relationship.

- 1

At-Risk Customers

Regulars who haven't visited in 14+ days. The AI can generate a personalised win-back message for each one — a nudge that has brought back real customers and real revenue for cafés using Zordic.
- 2

Customer table

Every customer with their visit count, loyalty tier (New → Regular → VIP → Elite), tags the AI has picked up from conversation (like "asked for offers" or "loves coffee"), and when they last visited. Use Register Walk-in above to manually add a customer who paid in person without chatting first.

Customer Chats — every conversation, live

Curious what your AI is actually saying to customers? This tab shows every single WhatsApp, website, and test conversation — word for word, updating in real time as they happen. Nothing is hidden from you.

- 1 Search box**
Find a conversation instantly by customer name, phone number, or even a word they used.
- 2 Conversation list**
Every customer who has ever messaged, newest first, with a preview of the last message. Tap any row to open the full thread.

1 Open thread

The complete back-and-forth for that customer — your café's messages on the right (gold), the customer's on the left (cream). This example shows a real table booking being completed automatically: name, guest count, date and time collected, then confirmed — all without you lifting a finger.

Reviews — feedback and ratings

After a visit, the AI can ask customers to rate their experience. Five-star ratings get an automatic thank-you and a small reward; anything lower comes to you privately first — before it ever becomes a public complaint.

- 1
- Feedback list**

Every rating collected, with the customer's comment. High ratings can also get an AI-drafted reply you can approve and post — and a nudge to leave a public Google review, which is one of the best free ways to bring in new customers.

AI Campaigns — automatic marketing

Instead of you sitting down each week to think up a promotion, the AI looks at your actual sales data and suggests one — timed for your slowest days, so you fill seats instead of discounting your busiest ones.

1 Generate AI Suggestions

Analyses recent activity in your café and proposes a specific, ready-to-send campaign (for example, a Tuesday-afternoon offer if Tuesdays are historically quiet).

2 Run Auto-Pilot Now

If you've set up day-specific campaigns in Settings, this sends today's scheduled offer immediately instead of waiting for its normal time — useful for testing.

Offer Requests

When a customer asks for a discount that's above what you've allowed the AI to grant automatically (see the Menu tab), the request lands here for your personal approval instead of being ignored.

- 1

Pending request

Shows exactly what the customer asked for. Approve it with your own custom offer text, or reject it — either way, the AI sends your decision straight back to the customer on WhatsApp.

Chat Simulator — test your AI safely

Want to see exactly how your AI would respond to a tricky question before a real customer asks it? Type or click a test message here — this is a private sandbox, real customers never see anything that happens on this screen.

Enable browser notifications to get alerted for new orders, reservations & WhatsApp messages.

1 Test phone / name

A fake customer identity for testing — change it any time to simulate different people.

2 Quick Presets

One-tap common questions (menu, offers, booking, price, location, feedback, discount, WiFi) in English and Hinglish, so you can spot-check your AI's behaviour in seconds.

Orders & Revenue — your live till

Every order placed by QR code or taken manually shows up here in real time, alongside how much money you're actually making — today, this week, and this month.

- 1

Order filter
Narrow the list down to just Pending, Preparing, Ready, or Served orders when the queue gets busy.
- 2

Order card
Table number, items ordered, running total, and status buttons your kitchen team taps as food moves through preparation — the same statuses your customer sees updating live on their own phone.

Table QR Codes

A QR code per table means guests can browse your menu and place an order straight from their seat — no app to download, no waiting for a waiter to bring a menu.

- 1

Table count

Set this to match how many tables you actually have.
- 2

Print All

Generates a printable sheet of QR codes, one per table — laminate them and stick one on each table.

Kitchen Display

A dedicated screen for your kitchen — no clipboard, no shouting order numbers across the room. Every order that comes in appears here instantly with a sound alert, and your team taps through its stages as they cook.

- 1
- Order ticket**

Table number, items, and time since the order came in. Tap the button at the bottom (Confirm → Start → Ready → Served) to move it through your kitchen workflow — the customer's own tracking screen updates the moment you do.

- 1 Category dropdown**
Classify each expense (ingredients, rent, utilities, staff, marketing, and more) so your reports break down spending in a way that actually helps you make decisions.

Data Sheets — your data, exportable anytime

Every order, customer, expense, and lead your café has ever generated lives here in one searchable place — and it's always yours to take with you.

- 1 Dataset pills**
Switch between different views of your café's data — orders, customers, expenses, leads, and more.
- 2 Export CSV**
Downloads whatever you're currently viewing as a spreadsheet file, opens in Excel or Google Sheets. There's no lock-in with Zordic — your data leaves whenever you want it to.

Settings — your café's control panel

Everything about how your café presents itself and connects to the outside world lives here: your details, your WhatsApp connection, your payment setup, and your own login password. You'll also find Café Theme (pick your dashboard's colour), Auto-Pilot Campaigns (day-specific offers sent automatically), and Razorpay Payments (accept online payment from customers) — each is self-explanatory with its own Save button.

Change Password

1 Phone Number ID

Part of connecting your café's WhatsApp number to Zordic so your AI can actually send and receive messages. This step needs a few details from Meta (WhatsApp's parent company) — Zordic support will walk you through it personally; see "Connecting WhatsApp" later in this

guide.

2

Test

Once you've entered your WhatsApp details, tap this to confirm the connection is actually working before you rely on it.

3

Change Password

Update your own login password any time — especially recommended right after your first login.

Owner Portal — check in from anywhere

A lighter, phone-friendly view of your café for when you're away from the counter — at home, running errands, or checking in from another city. Same login, same real data, just a simpler layout built for glancing at your phone.

What your customers actually see

When a guest scans the QR code on their table, this is their experience: your menu, real prices and photos, an easy cart, and a live order-status tracker — all in their own browser, nothing to install.

SCREEN 20

Your plans, side by side

A reminder of what each plan includes, visible any time on your public Zordic website — helpful if you're deciding whether to move up a tier.

Connecting WhatsApp

This is the one setup step with a few technical details, because it involves Meta (WhatsApp's parent company) rather than just Zordic. You don't have to figure this out alone.

- 1 In **Settings**, find the WhatsApp Cloud API section — this is where your café's WhatsApp number gets linked to your AI.
- 2 You'll need two pieces of information from Meta: a **Phone Number ID** and an **Access Token**.
- 3 **Contact Zordic support** — we'll walk you through getting these from Meta and get your number connected together, usually within a day.
- 4 Once entered, tap **Test** to confirm messages are flowing before you rely on it for real customers.

Until WhatsApp is connected, everything else in Zordic still works — QR ordering, your dashboard, loyalty, the Chat Simulator for testing. WhatsApp is the last piece that brings your AI receptionist to real customers.

FAQ & troubleshooting

I forgot my password.

On the login page, tap "Forgot your password?" A reset code is sent to your café's WhatsApp number (this only works once WhatsApp is connected — otherwise, contact support directly).

My AI isn't replying to customers.

Go to Settings and check the WhatsApp Cloud API section shows "configured" and passes Test. If it still doesn't work, contact Zordic support — this is almost always a connection detail on Meta's side, not something wrong with your café setup.

A menu price is wrong.

Go to Menu & Pricing, correct the price, and tap Save Menu. Your AI uses this instantly — no delay.

Can I control how much discount the AI is allowed to give?

Yes — see the Menu & Pricing chapter. You can set a café-wide limit, or an even higher limit for specific items.

Will I lose my data if I ever leave Zordic?

No. Every customer, order, and expense can be exported as a spreadsheet any time from the Data Sheets tab. It's always your data.

Questions? We're here to help.

zordic.in
